Disney's Raya and the Last Dragon Baby Tuk Tuk Toy	Hasbro	3y+	Hand-held	78.4	58.1

Decibel (dB) levels were taken using a hand-held digital sound level meter (Tenma®, Model 72-935) calibrated to manufacturer's specifications. A-weighted scale, set at a slow response time capturing the maximum sound level. 0 inches is equal to a child's ear to the toy and 10 inches is a child's arm length from the toy. Toys were tested at their highest volume setting. To decrease the volume of a noise-producing toy, SHA recommends adjusting the volume at the lowest setting and applying clear packing tape over the speaker of the toy. Please note, this is a consumer study and we encourage everyone to test toys by downloading any free Noise/Sound Level Meter app to their smart phone. And remember...if a toy sounds too loud to you, then it is too loud for your child.

This is a random sampling of toys that were tested off the shelves of toy retailers, it does not represent all the noise-producing toys manufactured in 2021.

Sight & Hearing Association – PO Box 40009, Saint Paul, MN 55104 – 800-992-0424, x11 – kwebb@sightandhearing.org

Celebrating over 80 years of identifying and preventing vision and hearing loss, in partnership with other professional and community organizations by providing screenings, education and research.
